PROFESSIONAL SUMMARY

Data scientist and ML engineer transitioning from seven years of enterprise sales and account management into applied analytics and machine learning. Proven expertise deploying GPU-accelerated systems (PyTorch/JAX) for real-time signal processing and building production-grade ML pipelines. Combines technical rigor in statistical modeling with stakeholder-facing experience translating complex data into measurable business outcomes — evidenced by shipped client work for an industrial operator and an AI research lab.

TECHNICAL EXPERTISE

ML & Statistics	Supervised/unsupervised learning, time-series forecasting, statistical inference (ANOVA, correlation), feature engineering, model validation, scikit-learn
Engineering	Python (Pandas, NumPy, Numba), SQL (PostgreSQL, ETL pipelines), REST APIs, Git/GitHub, CI/CD, Linux, infrastructure automation
Deep Learning	GPU acceleration, CUDA, PyTorch, JAX, real-time signal processing, anomaly detection
BI & Delivery	Tableau, Power BI (DAX), Streamlit, dashboard architecture, stakeholder management, technical documentation

FEATURED PROJECTS

- CONSIM — GPU-Accelerated Signal Processing** 2024 – present
- Engineered a GPU-accelerated framework for real-time pattern detection in high-dimensional time-series data.
 - Achieved a **20x performance uplift** using CUDA/PyTorch and JAX for parallelized mutual-information computation.
 - Implemented phase-coherence tracking and spectral-analysis modules for streaming anomaly detection.
- GitHub Language Analysis Platform — Data Analysis Capstone** 2025
- Built a six-notebook analysis pipeline (exploration, ANOVA-backed language comparison, correlation, 3D visualization, feature engineering) across 1,200+ GitHub repositories.
 - Shipped a companion React/Plotly dashboard embedding sunburst, treemap, and animated-evolution visualizations.
- Enterprise Predictive Analytics Platform** 2024
- Developed a classification engine with **78% cross-validated accuracy** using scikit-learn over 200k+ records.
 - Built a modular REST API for model inference and a TypeScript dashboard for non-technical executive visibility.
- Traffic Safety & Infrastructure Optimization — Data Analyst** 2024
- Conducted spatio-temporal analysis of 200k+ collision records to identify high-risk hotspots.
 - Delivered evidence-based reporting that informed a **\$1.2M infrastructure investment** strategy.

PROFESSIONAL EXPERIENCE

- Independent — Data & AI Systems** Nov 2025 – present
- Shipped the WVRTP facility inspection system for **Readyfuels**: a React/Vite/TypeScript app with QR-driven capture, browser geolocation, and a Power Automate pipeline into Microsoft 365 — plus a 1,135-formula Excel workbook for field safety scoring and KPIs.
 - Built the Hermes plugin for **Nous Research**: a three-subagent stack (codegen, red-team, resource-gathering) with multi-provider LLM routing.
- Strategic Account Manager | Analytics Lead — FleetPride** 2022 – 2024 · Buckhannon, WV
- Scaled territory revenue by **18% YoY (\$500k+)** by deploying predictive bundling models and customer segmentation.
 - Automated CRM reporting via SQL, identifying churn risk and driving a **25% increase** in contract renewals.
 - Developed demand-forecasting models in Power BI with **82% accuracy** to optimize inventory across distributed nodes.
- Outside Sales Representative — Cole Truck Parts** 2021 – 2022 · Jane Lew, WV
- Optimized B2B acquisition strategy through CRM lead scoring, improving regional conversion rates by **18%**.

EDUCATION

NewForce Cohort 11 2024–2025
Intensive Data Science Program — SQL window functions, Python statistical computing, dashboard architecture.

CERTIFICATIONS & AWARDS

- 1st Place, DataCamp Dog Breed Classification Competition
- DataCamp: Data Manipulation in SQL
- DataCamp: Advanced Window Functions
- DataCamp: Exploratory Data Analysis
